

DRYERASE

**Matte white front projection film
+ whiteboard coating
2 in 1 screen + write-and- erase**

ADWINDOW
creative projection films

DRYERASE is a matte film with no glare, perfect for front projection, and with a special polymer coating that give also a very good dry-erase whiteboard result.

DRYERASE is mainly targeted to the education and corporate market. It is a simple and efficient 2in1 solution of screen and whiteboard on the same surface. No more roll-up screens and glossy whiteboards, **DRYERASE** make it all.

Whiteboards are generally made of glossy materials (ceramics, metal, vinyls...) for a better dry-erase result, but then can't be projected due to reflection. Projection screens are usually matte to avoid glares, but can't be written on. **DRYERASE** 2in1 does not produce glare during the projection, and can be written, wiped off, written, wiped off again and again. **DRYERASE** last years, and can be used for new installations or retro-fitting any existing whiteboard or black board surface. **DRYERASE** is cheap, easy to ship and to install.

Thanks to its high tack texturized permanent STIKI adhesive, **DRYERASE** can be mounted directly on any smooth surface: ceramic, metal, whiteboard, blackboard, laminate wall, smooth paint... It is a quick and affordable way to create a collaborative surface or to replace damaged or old whiteboards.

DRYERASE can be stuck any smooth and plane surface, like glass, acrylic, plastic sheets as PET or polycarbonate, laminated wall panels. **DRYERASE** can be laminated also on aluminium sheets or any rigid material to create ready-to-hang 2in1 surfaces.

EDUCATION

DRYERASE was initially created for the education market, as a side product for collaborative solutions. Due to its versatility, the film can be used for retrofitting an existing installation, transforming an old white-, black- or greenboard in a projection screen while maintaining the write and erase feature. Or it can be use for covering a full wall with several projectors or writing areas.

DRYERASE has a high diffusion level, and a low gain, and is totally suitable for short-throw and ultra short throw (UST) projectors: no glare nor light distortion. Also, **DRYERASE** works perfectly with interactive technology, either with IR, camera, or touch procap.

CORPORATE AND ARCHITECTURE

DRYERASE can be used for adding design to utility: create a whiteboard screen floating on a glass panel, or use **DRYERASE** to create a partition wall on which you can project and write.

DRYERASE is available in rolls of 122cm or 152cm width, and also cut to measure. Special discounts apply for volume projects. We can also ship single units to multiple points of delivery.

INSTALLATION

BACKUPS: glass, acrylic, ceramic, metal, laminate, PVC / PET / PC, smooth painted wall

Recomended installation: ON or OFF AXIS

Recomended projection angle: no mandatory, but ok up to 35°

Multi-pieces for large screens: YES, side by side without overlap

Short- and ultrashort-throw: YES, within projector's manual sizes limits

ROLL

Adhesive: permanent pressure sensitive, high tack, texturized for easy installation – Acrylic base

Roll width: available in 122cm and 152cm
